Pam,

As we discussed last week, Energy West request extensions to the following report/amendments:

1) Annual Report

- Hydrologic & Subsidence sections are complete and will be transmitted to you on April 2, 2002 (Cottonwood Fan Portal Bond Release meeting).

- General (includes vegetation monitoring): Energy West received the annual vegetation report from our subcontractor last week. Energy West requests that the Division grant a 30 day extension with the responses due May 1, 2002. The extension request will allow Energy West time to incorporate data from the vegetation report to the vegetation monitoring maps.

2) Des-Bee-Dove Phase 2

To address deficiencies documented in the TA (AM01D) concerning slope configurations and mass balance discrepancies, Energy West has been working with the subcontractor who originally provided the data to revise the post reclamation base maps and corresponding mass balance data. Energy West requests that the Division grant a 30 day extension with the responses due April 29, 2002. The extension request will allow Energy West time to incorporate the revised data from the engineering subcontractor. Submittal of the Phase 2 plan is Energy West's number one priority. The plan will be submitted to the Division as soon as the data is received from the subcontractor.

3) Cottonwood Mine: Old Waste Rock Site: Appendix 7

Appendix 7 was conditionally approved on March 1, 2000 (clean copies sent to the Division on April 16, 2001). Energy West received deficiencies related to Appendix VII on March 8, 2002. Energy West resolved some of the very same deficiencies with the former soil specialist (Bob Davidson) in preparation of the original amendment and the Phase 1 Bond Release Application. Energy West requests that the Division grant a 30 day extension with the responses due April 29, 2002. The extension request will allow Energy West time to resolve and clarify the deficiencies cited in the TA dated March 4, 2002.
